Website Initial CSS Report

**CSS Properties Used:**
- background-color
- font-size
- width
- height
- color
- font-family
- list-style-type
- margin
- padding
- overflow
- text-decoration
- text-align

**CSS Classes Defined and Rationale for Defining:**
- body, image, img, list
- We created these classes in order to make our code less repetitive and more efficient by styling multiple things in the same way using just one block of code.

**Description of Additional Functionality Envisioned with JavaScript:**
- Create confirmation boxes: if a user decides to "discard" their review that has not been submitted, a confirmation box will pop up asking the user for confirmation that they would like to discard their review
- Mouse events: when a user hovers their mouse over an image, a caption describing the image will appear, and when the mouse is moved away the caption will disappear
- Onsubmit: after a user submits a review, onsubmit will be used to thank the user for submitting a review
- Slideshow: create a slideshow of pictures on the home page of various dining locations and its food

**Individual Team Member Contribution:**
- Anthony:
  - Anthony was a good support to the team. We could rely on him to be there when things got tough. He is a good communicator in the chat and does not remain silent.
- Jonathan:
  - Jonathan has lived up to our expectations. He did exactly what he was asked to do. A good listener and flowed perfectly with group work.
- Kathryn:

- ○ Kathryn was a huge contributor to the project. She figured out all the CSS styles and syntax for a lot of the code. The navigation bar is thanks to her and she aided all elements of the project. Kathryn wrote the majority CSS website report.
- Daniel:
    - ○ Daniel came up with the initial website layout and has helped throughout the entire process of the project. He typed everything on his computer and submitted the files. He was able to figure out a lot of the html code that was implemented. Daniel helped write the CSS website report.
- Dave:
    - ○ Dave has been a great help brainstorming website ideas, styles, and organization. He helped find code to insert images into the html files. He was always there when needed and helped with most aspects of the project.
